

Cognitive Bias Exercise 1-1

(Based on [Cognitive bias cheat](#) sheet by Buster Benton.)

Instructions:

Using the Wikipedia links or other resources, create a one sentence definition for each bias.

Find and record examples of each bias.

Scoring: 1 point for each example of a bias, 3 points if it's in your own work.

Problem 1: Too much information

Summary: We notice things that are already primed in memory or repeated often.

[Attentional bias](#):

[Availability heuristic](#):

[Base rate fallacy](#):

[Context effect \(Cue-dependent forgetting, Mood-congruent memory bias\)](#):

[Empathy gap](#):

[Frequency illusion \(Baader-Meinhof Phenomenon\)](#):

[Illusory truth effect](#):

[Mere exposure effect](#):

[Omission bias](#):
